This workshop introduces tools, techniques and general best practices to map, manage, analyze, share data and other GIS resources, create accurate maps and produce reliable analysis results. The workshop will give you the experience needed to efficiently work with ArcGIS Pro, the leading desktop GIS application, which offers data visualization, advanced data analysis, and data maintenance in 2D and 3D.

Organize, create, and edit geographic data. Manage, symbolize, and label map layers. In addition, you will learn foundational skills for working with ArcGIS Online and ArcGIS Apps (ArcGIS Field Maps, ArcGIS Experience Builder, ArcGIS Survey 123, ArcGIS for Excel, ArcGIS Dashboards, ArcGIS StoryMaps) and the potential benefits for you.
